SUMMARY

Electronics Engineering graduate with hands-on experience in embedded systems, computer vision, AI, and IoT. Proficient in C++ and Python, with industry experience in IoT-based monitoring and biomedical equipment maintenance. Experienced in developing and integrating hardware-software systems through academic and final-year projects.

EDUCATION

Bachelor of Electronics Engineering with Honours

Universiti Teknologi MARA (UiTM) | 2023 - 2026
CGPA: 3.5

Diploma in Electrical Engineering (Electronic)

Universiti Teknologi MARA (UiTM) | 2020 - 2023
CGPA: 3.49

TECHNICAL SKILLS

- **Programming:** C++, Python
- **Engineering:** Embedded Systems, PLCs, Electronics
- **AI:** Computer Vision, Object Detection, Multi-Object Tracking
- **Systems:** IoT Integration, Hardware-Software Integration
- **Other:** Data Analysis, Medical Equipment Maintenance, Project Management, Team Leadership

CERTIFICATIONS

- AWS Academy Graduate — Cloud Foundations, 2026
- Omada Certified Network Administrator (OCNA) — Wireless, 2026
- Google Advanced Data Analytics Certificate, 2026
- Fiber Optic Competency Certificate, 2023-2028

HONOURS & ACTIVITIES

- **Silver Medal** — International Research & Information Science Expo 2025
Tertiary, Science & Technology Category
- **Conference Presenter** — InnoSTRE 2022

EXPERIENCE

Biomedix Solutions Sdn Bhd

Biomedical Engineering Maintenance Services (BEMS) Intern | Aug 2025 - Sept 2025

- Performed maintenance, troubleshooting, and calibration on medical equipment
- Assisted with documentation using the company's Preventive Maintenance (PPM) forms

Maxwell Cfm International Sdn Bhd

Intern | Mar 2023 - July 2023

- Supported commissioning and decommissioning of IoT-based equipment performance monitoring sensors
- Promoted the company's Equipment Performance Monitoring (sensors + IoT) product line to clients, including follow-up sessions
- Represented the company at the Digital Village Accelerator (DiVA) alongside the CEO; led an intern team on an internal company project and served as lead presenter

PROJECTS

OneTracer: Context-Aware Multi-Modal Missing Person Detection System

Final Year Project · 2026

- Designed a decoupled matching architecture that routes person profiles through scenario-specific confidence scoring depending on whether the reference data is CCTV footage or a photograph, addressing a gap where existing systems assume one fixed reference type
- Integrated YOLOv8 (detection), BoT-SORT (multi-object tracking), OSNet (re-identification), and ArcFace (facial recognition) into a single browser-accessible pipeline with an interactive click-to-track registration workflow
- Evaluated across 5 individuals and 3 indoor test videos (F1-scores of 70.73-78.56% for footage-based matching, up to 88.26% precision for photo-based matching); conducted an ablation study and mechanism-level error analysis to explain performance under low-light and non-frontal conditions

Real-Time PPE Compliance Monitoring System

Integrated Design Project · 2025

- Built a YOLO-based object detection system on Raspberry Pi 5 with PiCamera2 to monitor personal protective equipment (PPE) compliance in real time
- Integrated DeepSort tracking to maintain consistent identity tracking of individuals across frames
- Built a centralized data logging and alert notification pipeline using Google Sheets and Blynk for remote monitoring
